

## **What can be found in the LUDA Regeneration Process Step Protocols?**

Each of the steps of the LUDA Regeneration process has been divided into individual assessment tasks.

For each task the **input** – information, which is necessary to carry out the task - is specified. In many cases, the input is an outcome of a task in the earlier steps of the LUDA Regeneration Process.

Following are the **rules or good advice**, recommending what to take into consideration when carrying out this assessment task.

Then the **assessment methods and techniques** that can be used in this specific task are listed.

The expected **output of the task** is presented. Most of these outputs are needed as entry points for the tasks in the subsequent assessment steps.

Finally, the **overall output** of the step of LUDA Regeneration Process is described.
